

# Blog Work

## HTML – front end widget

The front end widget looks like it's had at least 1 line break inserted. Can this be removed?

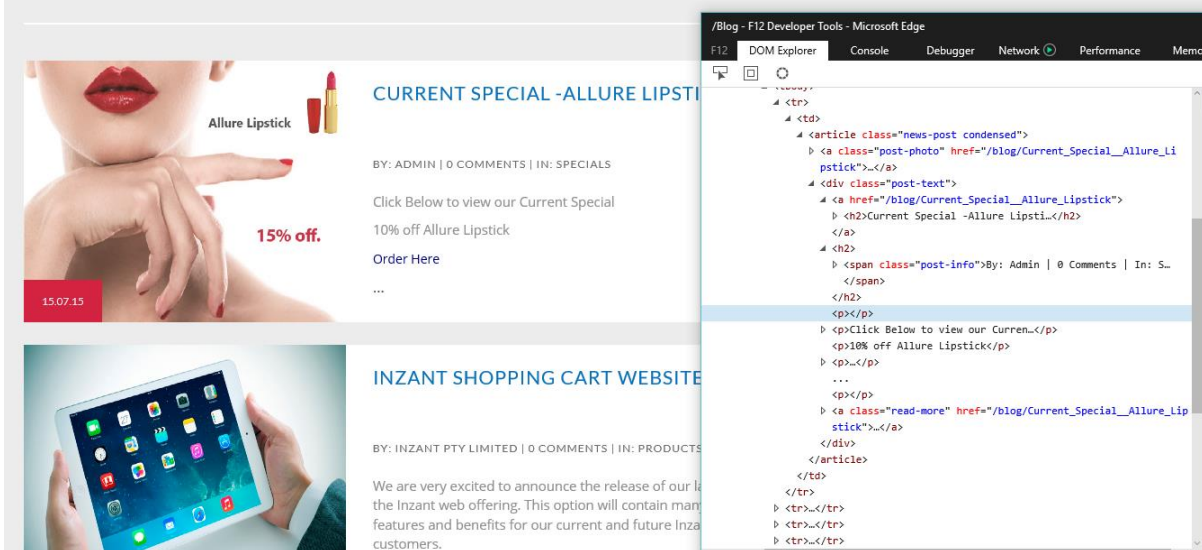

Our version

Designer version – <http://distributors.bbldigitaldev.com.au/news.php>

## BLOG

## Synopsis Modification

Blog Synopsis should be modified to be a NON CK Editor text box to prevent line feeds being introduced. The ideal amount of text in this zone is approx. 280 characters (including spaces) – so potentially we should limit the length of the field as well.

This will allow the “read more” link to always be visible within the “preview” zone.
